

POLYTECH FOAM CONCRETE SYSTEM

WHAT MATTERS TO US?

Our mission is to develop, test and implement innovative and environment-friendly solutions for the construction industry.

We are working towards becoming the leader in our industry. The focus of our work is on developing comprehensive solutions related to the design, application, certification and improvement of mortars and lightweight concrete.

Jakub Kieloch

Marco Lamanna

The foundation stone of whatever we do is family. We believe that the family business model we are expanding and the strong belief in the value of what we do are a guarantee of our ge-

nuine commitment to taking our business, technology and products further.

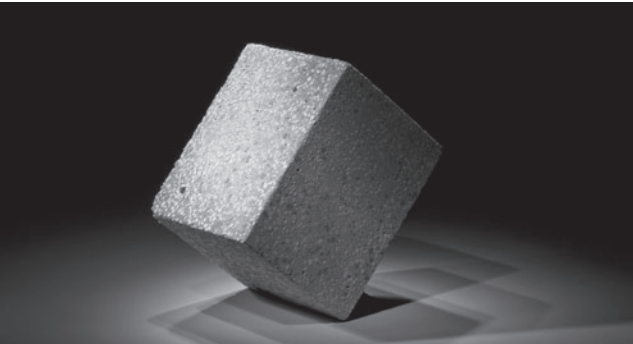

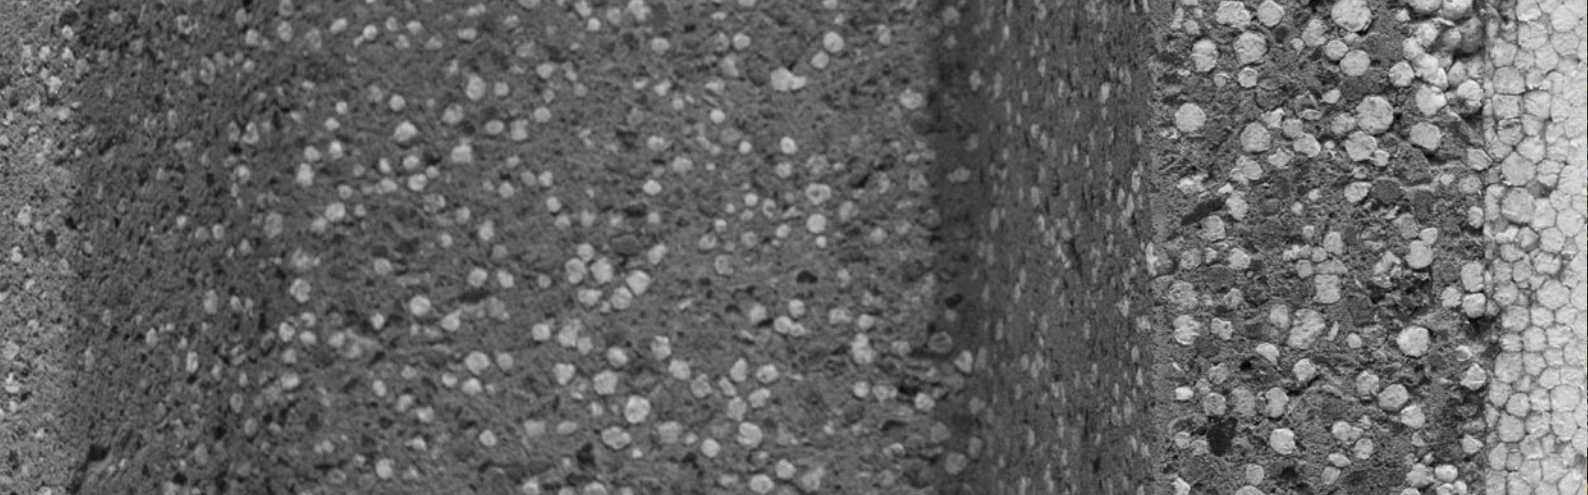

Salvatore Lamanna

Mateusz Kieloch

We also work to counter harmful stereotypes about the construction industry. The solutions we offer are designed to meet market needs and to respond to climate change. It is a priority in our daily work to assure high ethical business standards, along with developing long-lasting business relationships with construction project owners, business partners and customers.

TECHNOLOGIES

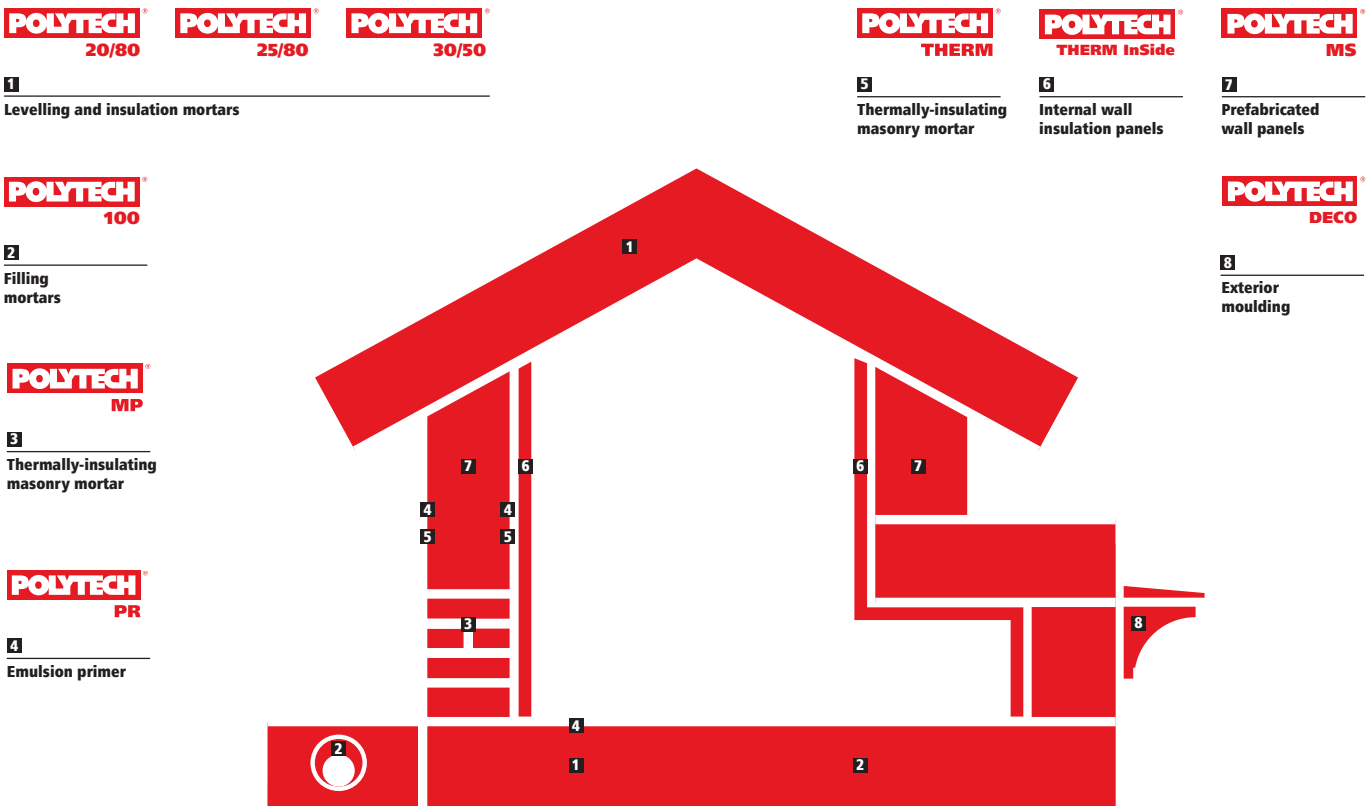

BUILDING ON STRONG FOUNDATIONS

We use time-tested products which, when combined with our growing range of modern technologies, allow us to make and deliver solutions that meet the real needs of contractors and users.

The products and technologies found in our solutions are used in residential and industrial construction projects.

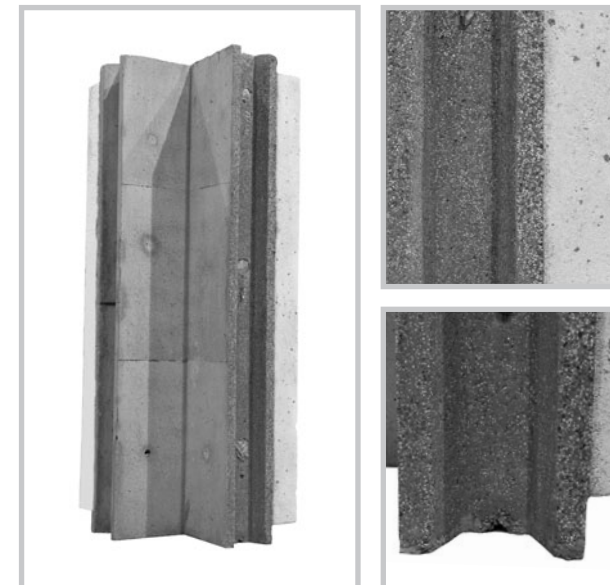

Our internally designed solutions and third-party products improved by our team are used in all types of buildings. These are both newly designed and existing structures and include buildings of architectural heritage value.

TECHNOLOGIES

Our product range comprises a thermal and acoustic insulation system that allows us to construct low-energy buildings, including floors, walls, flat roofs and terraces.

The mobility feature of the system means that the construction materials can be made at the building site or at our prefabrication facility.

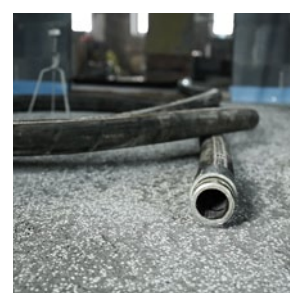

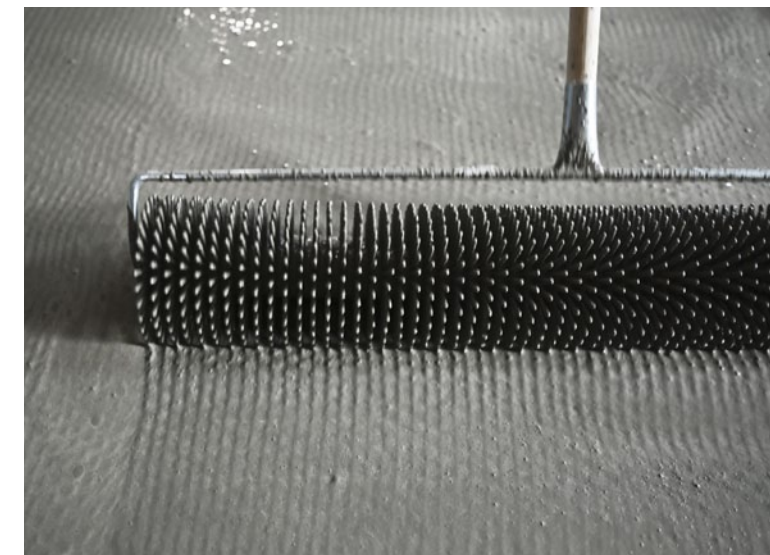

MACHINERY

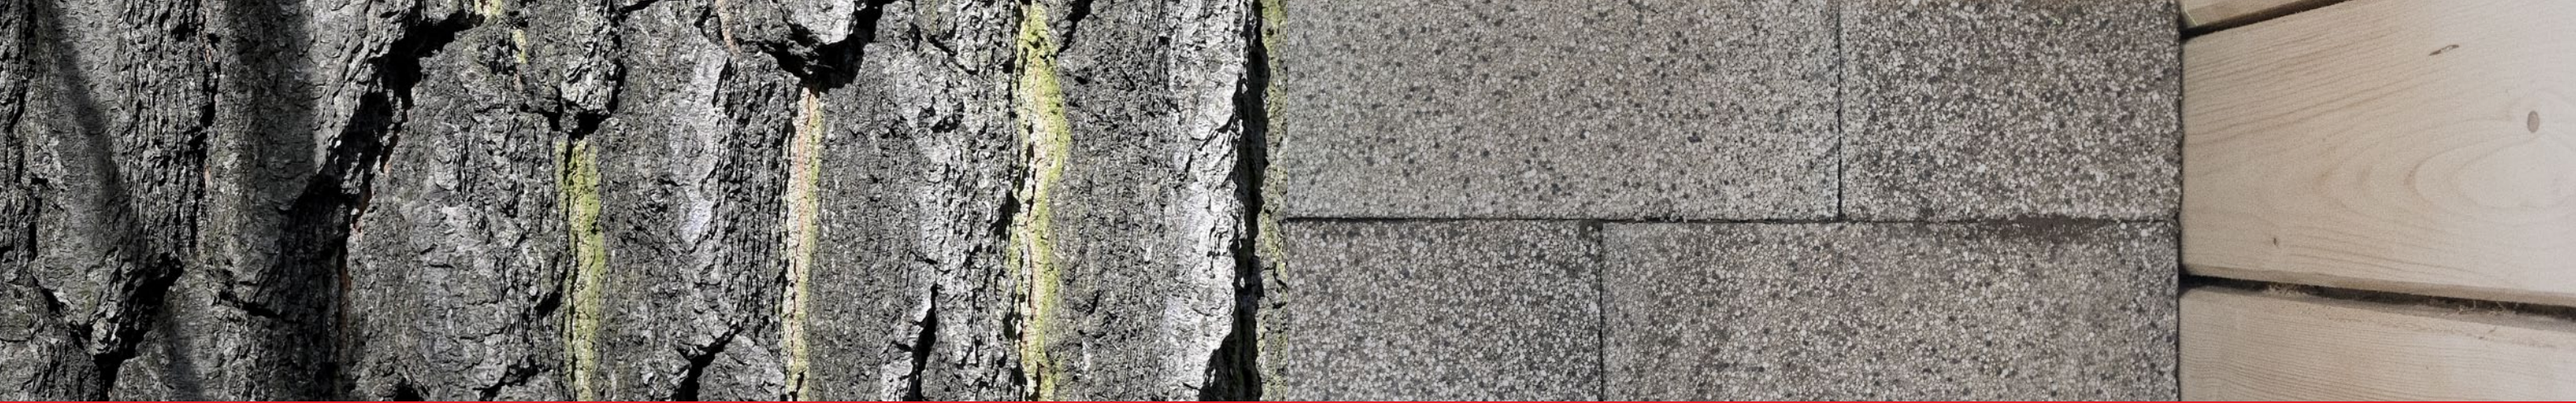

INNOVATIVE SOLUTIONS FOR HIGH EFFICIENCY

Our solutions can be trusted for their high efficiency. As they are easy to use, it does not take a long time to train workers in using them.

We know that both new and existing construction solutions can be optimised only if top-quality machinery and equipment are put to work.

The machinery and equipment designed specifically for our technologies are simple and easy to use. They are also highly efficient at work and feature low energy consumption. Our systems are fully customizable. This makes the work of contractors much easier and offers real benefits for users.

CARE FOR THE ENVIRONMENT

THE ENVIRONMENT WE LIVE IN MATTERS TO US

The construction industry has the privilege of shaping the physical world in which we live. This, however, is not only a privilege. It is also our commitment to care for the natural world.

As we feel responsible for our planet, it is our policy to produce resources rather than to produce waste. In our production process, we use recycled plastic waste, such as recycled polystyrene granules. This allows us to re-use waste in Polytech production in a way that is safe to users.

Our strong commitment to compliance with all national and EU environmental protection laws guarantees that our products are regularly modified to respond to climate change and to meet construction industry standards.

ENERGY-SAVING SOLUTIONS

ENERGY-SAVING SOLUTIONS FOR GENERATIONS

One of the priorities in our pro-environment and pro-climate activities is to reduce energy consumption.

Our products feature low energy consumption in the production process. They allow our customers to use less energy when heating and/or cooling their buildings. This is our contribution to reducing the global carbon footprint.

COOPERATION IN BUSINESS

BUILDING A COMMUNITY YOU CAN JOIN

Join us to take the Polytech Foam Concrete System further!

We realise the potential of the Polytech Foam Concrete System. And we know that we can achieve excellence only with a committed team. The products and services offered by our brands: AKCES BK, Coisoimper and Tech Service Polska prove that we can be trusted as a reliable business partner.

for cooperation with new business partners. We can be your supplier of machinery and equipment and support you with technical know-how.

Our business partners can rely on our financial transparency, training and assistance with designing and implementing production policies.

As we continue to expand our range of products and technologies, we are open to opportunities

We are looking forward to working with you, as we believe that we can join hands to develop innovative solutions for the construction industry.
